

ENVIRONMENTAL POLICY

At 4G Ingeniería, we take our commitment to environmental protection seriously. We are fully aware that our activities have an impact on the environment, and therefore we adopt the following principles as an essential part of our management:

1. **Regulatory Compliance:** We ensure full compliance with current environmental legislation, as well as with other applicable requirements related to our processes and operations.
2. **Pollution Prevention:** We are committed to identifying, assessing, and controlling the environmental aspects associated with our activities, with a special focus on proper management of metal waste, industrial oils, atmospheric emissions, and efficient use of water and energy.
3. **Responsible Resource Management:** We promote the reduction of raw material consumption, the reuse of materials, and the recycling of metals and other supplies whenever technically feasible.
4. **Environmental Awareness and Training:** We foster an environmental culture among our collaborators through training programs, awareness initiatives, and active participation in improving our processes with a sustainable approach.
5. **Continuous Improvement:** We establish environmental objectives and targets aligned with our production processes and maintenance plans, aiming to progressively reduce our environmental impact.
6. **Sustainable Technology and Innovation:** We promote the modernization of our facilities and machinery with cleaner and more efficient technologies that enhance productivity without compromising the environment.

This environmental policy will be communicated, understood, and implemented by all members of the organization and made available to interested parties, as a demonstration of our commitment to sustainable development and environmental responsibility within the metal-mechanical industry.
